

# Design goals

- **User-Friendly Interface:** The system should be designed to be user-friendly for both instructors and students. This includes having menus that are easy to navigate, clear navigation, and tools and features that are easy to use.
- **Accessibility:** The system should be designed to accommodate users with disabilities, including those who use assistive technologies such as screen readers or keyboard navigation.
- **Security:** The system should be designed to ensure that user data is kept private and confidential. This includes implementing secure login and authentication procedures, as well as data encryption and other security measures.
- **Scalability:** The system should be designed to handle a large number of users and courses, with the ability to scale up as needed.
- **Customization:** The system should be designed to allow for customization and personalization, both for individual users and for institutions

- **Interoperability:** The system should be designed to integrate with other systems and platforms, such as learning management systems, content management systems, and student information systems.
